Dear Mr. Wübben,

I am excited to submit my application for the "IT Product Management Specialist (GLAV-220990)" role, drawing upon my extensive background in automation and AI/ML solution development within the P&P division. My journey has taken me through various roles, culminating in positions as a Solution Architect and Data Scientist in the Quality Intelligence Department (Abt.182), alongside contributing to GenAI projects in the Department of Innovation Management (Abt.4610). These experiences have enriched my understanding of crafting and executing AI strategies to streamline processes.

I have a proven track record of advising departments on technological solutions, identifying and implementing use cases for automation and AI, and spearheading the development of solution concepts from initial analysis to evaluation. My experience in building AI/ML prototypes, setting up data infrastructure, and leading the architecture design for various stages of project development, from PoC to production, underscores my capability to contribute meaningfully to your team.

Notably, my work in automating, standardizing, and optimizing company processes, as well as presenting digitization solutions at IT events, has honed my skills in proactive communication and stakeholder engagement, crucial for the proactive presentation of potential applications of GenAI as outlined in your role description. Furthermore, my hands-on experience in project management, from conceptual advice to the implementation of projects and support in decision-making processes, aligns with the need for continuous exchange on technical feasibility and the introduction of GenAI solutions within your division.

I am particularly drawn to this role's focus on leveraging GenAI to enhance and accelerate processes. My background in RPA technology, which shares a similar ethos of process improvement through innovative tech, has prepared me to quickly adapt and find synergies in using GenAI for the P&P division's objectives. I am eager to bring my expertise in data-driven decision-making, project management, and technical innovation to your team, contributing to the realization of GenAI's full potential in your operations.

I am looking forward to the opportunity to discuss how my background, skills, and enthusiasms can contribute to the exciting developments. Thank you for considering my application. I am keen on the opportunity to contribute to your team and to further discuss how I can bring value to your organization.

Warm regards,

Igor Nikolaienko
